ALTERATION OF SOLICITATION DOCUMENT: In the event of inconsistencies or contradictions between language contained in the State's solicitation document and a vendor's response, the language contained in the State's original solicitation document will prevail. Intentional manipulation and/or alteration of solicitation document language will result in the vendor's disqualification and possible debarment.

ASSIGNMENT, TRANSFER AND SUBCONTRACTING: The contractor shall not assign, transfer or subcontract any portion of the contract without the express written consent of the department. (Mont. Code Ann. § 18-4-141.)

Wildlife and Energy Literature Review- Passerines and Raptors Scope of Work

Justification: The Bureau of Land Management, which oversees much of the land and even more of the subsurface mineral rights in Montana, is currently preparing new land-use plans in the Miles City and Malta Field Offices. These plans will guide the management of these areas over the next 15 to 20 years. These updates are timely in the face of increasing oil, gas, and wind development in the planning areas. The planning process provides a significant opportunity for Montana Fish, Wildlife, and Parks. Our ability to facilitate the compilation and distribution of the most recent research will help ensure the inclusion of the best available science in the planning process. Because these plans are moving forward on a short timeframe there is a limited ability to conduct research at a local level. Therefore, based on peer-reviewed research conducted elsewhere, managers can make predictions of the effects of energy development and the associated infrastructure to wildlife populations.

Goal: Compile existing literature of the potential effects of energy development and production activities on passerines and raptors into a format that will be a useful tool for wildlife managers, land managers, and industry to help make land use decisions based on current scientific knowledge.

Responses of passerines and raptors to all aspects of oil and gas development should be reviewed including, but not limited to the effects of noise, roads, traffic, human presence, drilling rigs, operational wells, and general habitat fragmentation. The level (i.e. density of roads, number of cars, density of well pads) of each of these disturbances should be incorporated into the resulting product whenever possible. Effects shall be broken into biologically significant seasonal ranges to address effects on mating behavior, nesting, and rearing of young. The habitat types of greatest interest are those that dominate the planning areas in central and eastern Montana including sagebrush, grassland, and pine breaks.

Products: An extensive review of the literature will produce 1*) Summary tables related to a) the study design and level of peer review and b) type of disturbance, and the response and effects to wildlife, 2) a searchable electronic database of the literature including abstracts or research summaries.

(*For an example of the expected product, see Beck, J. L. 2006. Summary of oil and natural gas development impacts on prairie grouse. Unpublished Report, Colorado Division of Wildlife, Grand Junction, Colorado, USA)

Deliverable Date: On or before December 15th, 2007.
